Introduction

Dedicated Full Stack Developer focused on delivering high-quality digital solutions, with a primary specialization in developing intelligent chatbots and executing rigorous automation testing for global clients. I combine my experience in building company portfolios, websites, and scalable web applications with a quality-driven mindset to ensure every product is scalable, bug-free, and performance-optimized. My approach bridges the gap between sophisticated frontend and backend development and reliable test automation, ensuring seamless user experiences and operational excellence.

Education

University of Management and Technology, BS in Computer Science Oct 2022 - Present

- GPA: 3.18/4.0
- **Coursework:** Programming Fundamental, Object Oriented Programming, Data Structure Algorithm, Database, Operating System, Artificial Intelligence, Deep Learning

Experience

Internship at WeRQA

Projects

WeRQA (Website)

- Contributed to the platform's stability and visual flow by conducting comprehensive testing and implementing precise code fixes for the homepage animations and the "Team" section.
- Tools Used: HTML, CSS

Chest Xray

github.com/name/repo

- Developed a deep learning-based system using Python to detect pneumonia from chest X-ray images. Implemented DenseNet and EfficientNet-B0 models to classify images as Normal or Pneumonia, achieving high accuracy and reliable performance through advanced feature extraction and model optimization techniques.
- Tools Used: Python

Contact Book

github.com/name/repo

- Developed a console-based Contact Book application using C++, implementing core Data Structures and Algorithms (DSA) such as linked lists, trees, and sorting/searching techniques. The project allows users to add, search, update, and delete contacts efficiently, demonstrating strong command over memory management and algorithmic problem-solving.
- Tools Used: C++

Kellyas-Template

github.com/name/repo

- Designed and developed a responsive front-end website template using HTML and CSS. The layout includes a modern user interface with clean design, intuitive navigation, showcasing strong understanding of front-end web development and UI/UX principles.
- Tools Used: HTML, CSS

Railway Management System

github.com/name/repo

- Developed the front-end of a Railway Management System using HTML, CSS, and JavaScript. The interface includes interactive features such as train schedules, booking forms, and login credentials. The design is responsive and user-friendly, demonstrating strong skills in front-end development and UI/UX principles.
- Tools Used: HTML, CSS

Technologies

Languages: C++, HTML, CSS, React.js, Next.js, Typescript, PHP, Laravel, Python
