Introduction

Results-driven Full Stack Developer with expertise in designing and developing scalable web applications using Laravel, PHP, React.js, Next.js, and TypeScript. Experienced in building modern, high-performance web solutions, implementing automation workflows, and delivering reliable software through clean architecture and quality-focused development. Additionally, possess hands-on experience in developing intelligent chatbots and training Machine Learning and Deep Learning models for real-world applications. Passionate about solving complex problems, optimizing application performance, and creating seamless user experiences across frontend and backend systems.

Education

University of Management and Technology, BS in Computer Science Oct 2022 - Present

- **Coursework:** Programming Fundamental, Object Oriented Programming, Data Structure Algorithm, Database, Operating System, Artificial Intelligence, Deep Learning

Experience

Web Developer Internship, WeRQA April 2026 – July 2026

- Developing and maintaining full-stack web applications using Laravel, PHP, React.js, and Next.js.
- Building scalable web solutions, implementing new features, and optimizing application performance across frontend and backend systems.

Web Developer, WeRQA July 2026 – Present

- Developed and maintained modern full-stack web applications using Laravel, PHP, React.js, and Next.js.
- Designed and implemented responsive, scalable web solutions with seamless integration between frontend and backend components.
- Enhanced application performance by optimizing code, improving system efficiency, and delivering new features based on project requirements.
- Collaborated throughout the software development lifecycle to deliver reliable, maintainable, and user-focused web applications.

Projects

App Lens github.com/name/repo

- AppLens is a web QA and testing tool that scans websites for UI issues, broken links, console errors, and accessibility problems. It auto-generates test cases, captures screenshots and recordings, and exports reports — all organized by project. Built with React, Node.js, and Puppeteer, it runs in the browser or as an Electron desktop app for full-site automation without CORS limits.
- Tools Used: Vite + React, Typescript, Express, Node, Electron

WeRQA (Website)

- Contributed to the platform's stability and visual flow by conducting comprehensive testing and implementing precise code fixes for the homepage animations and the "Team" section.
- Tools Used: HTML, CSS

Chest Xray github.com/name/repo

- Developed a deep learning-based system using Python to detect pneumonia from chest X-ray images. Implemented DenseNet and EfficientNet-B0 models to classify images as Normal or Pneumonia, achieving high accuracy and reliable performance through advanced feature extraction and model optimization techniques.
- Tools Used: Python

Contact Book

github.com/name/repo

- Developed a console-based Contact Book application using C++, implementing core Data Structures and Algorithms (DSA) such as linked lists, trees, and sorting/searching techniques. The project allows users to add, search, update, and delete contacts efficiently, demonstrating strong command over memory management and algorithmic problem-solving.
- Tools Used: C++

Kellyas-Template

github.com/name/repo

- Designed and developed a responsive front-end website template using HTML and CSS. The layout includes a modern user interface with clean design, intuitive navigation, showcasing strong understanding of front-end web development and UI/UX principles.
- Tools Used: HTML, CSS

Railway Management System

github.com/name/repo

- Developed the front-end of a Railway Management System using HTML, CSS, and JavaScript. The interface includes interactive features such as train schedules, booking forms, and login credentials. The design is responsive and user-friendly, demonstrating strong skills in front-end development and UI/UX principles.
- Tools Used: HTML, CSS

Technologies

Languages: C++, HTML, CSS, React.js, Next.js, Typescript, PHP, Laravel, Python
